CONTENTS OF VOLUME 166

NUMBER 1, OCTOBER 1987

Review. Use of Extracellular Matrix Components for Cell Culture	
<i>H. K. Kleinman, L. Luckenbill-Edds, F. W. Cannon, and G. C. Sephel</i>	1
Isolation of Human Liver Angiotensin-Converting Enzyme by Chromatofocusing	
<i>Ivan Yu. Sakharov, Sergei M. Danilov, and Nadejda V. Sukhova</i>	14
Instability of Bovine Brain Clathrin-Coated Vesicles on Sephacryl S-1000 Gel Chromatography	
<i>Jean-Paul Privat, Marguerite Egret-Charlier, and Marius Ptak</i>	18
An Enzyme-Linked Immunoassay for Lipoprotein Lipase	
<i>John W. F. Goers, Mary E. Pedersen, Philip A. Kern, John Ong, and Michael C. Schotz</i>	27
Preparation of Cell Envelopes of Large Numbers of Individual Bacterial Strains with the Use of an Automatic Cell Disruptor	
<i>L. Van Alphen, C. Romijn, H. Brandt, L. Geelen, and H. C. Zanen</i>	36
Quantitative Immunochromatographic Analysis: Theory and Application to Theophylline Immunoassay	
<i>Stephen R. Lee and Paul A. Liberti</i>	41
A Solid-Phase Method for the Quantitation of Protein in the Presence of Sodium Dodecyl Sulfate and Other Interfering Substances	
<i>J. B. Sheffield, David Graff, and H. P. Li</i>	49
Trace Enrichment of Biological Folates on Solid-Phase Adsorption Cartridges and Analysis by High-Pressure Liquid Chromatography	
<i>Tessio Rebello</i>	55
Immobilization and Assay of Low-Molecular-Weight Phosphomannosyl Receptor in Multiwell Plates	
<i>Jack J. Distler, Rita Patel, and George W. Jourdian</i>	65
Postcolumn Fluorometric Detection System for Liquid Chromatographic Analysis of Amino and Imino Acids Using <i>o</i> -Phthalaldehyde/ <i>N</i> -Acetyl-L-cysteine Reagent	
<i>Michihiko Fujiwara, Yasuo Ishida, Noriyuki Nimura, Atsuko Toyama, and Toshio Kinoshita</i>	72
Membrane Open-System Cell for Oxygen Consumption Measurement	
<i>Ernst Titovets</i>	79
A Confidence Interval for Mutant Frequency in Assays Using Microtiter Wells	
<i>Harold S. Javitz</i>	83
A Rapid Method for Assay of Glycosidases Involved in Glycoprotein Biosynthesis	
<i>Annette Herscovics and Susan Jelinek-Kelly</i>	85
A Synthetic Substrate for tRNA Splicing	
<i>Vicente M. Reyes and John Abelson</i>	90
An Automated Assay for Adenylate Cyclase Using Reversed-Phase High-Performance Liquid Chromatography	
<i>Laura J. Reysz, Alan G. Carroll, and Harry W. Jarrett</i>	107
Modified Methods for Measuring Citrulline and Carbamoyl- β -alanine with Reduced Light Sensitivity and Sucrose Interference	
<i>B. Zarabian, F. Koushesh, and A. Vassef</i>	113
Coupled-Enzyme and Direct Assays for Uroporphyrinogen III Synthase Activity in Human Erythrocytes and Cultured Lymphoblasts. Enzymatic Diagnosis of Heterozygotes and Homozygotes with Congenital Erythropoietic Porphyria	
<i>Shih-feng Tsai, David F. Bishop, and Robert J. Desnick</i>	120
Assay and Properties of <i>N</i> -Acetylglucosamine-6-phosphate Deacetylase from Rat Liver	
<i>Patrick Campbell, Torvard C. Laurent, and Lennart Rodén</i>	134

A Small-Scale Method for the Isolation of Insulin-Containing Secretory Granules from Islets of Langerhans	<i>Peter M. Jones, Torben Saermark, and Simon L. Howell</i>	142
Use of a Chemiluminescence Detector for Quantitation of Nitric Oxide Produced in Assays of Denitrifying Enzymes	<i>T. Govind Pai, W. J. Payne, and J. LeGall</i>	150
Separation of DNA Restriction Fragments by Ion-Exchange Chromatography on FPLC Columns Mono P and Mono Q	<i>Elisabeth Westman, Stig Eriksson, Torgny Låås, Per-Åke Pernemalm, and Sven-Erik Sköld</i>	158
An Assay of Collagenase Activity Using Enzyme-Linked Immunosorbent Assay for Mammalian Collagenase	<i>Hidekatsu Yoshioka, Ikuko Oyamada, and Gentaro Usuku</i>	172
Simultaneous Determination of Psychosine and Cerebrosides	<i>Takao Ichioka, Yasuo Kishimoto, and Andrew M. Yeager</i>	178
A Fluorometric Assay for the Potassium-Dependent Phosphatase Activity of the (Na ⁺ + K ⁺)-Adenosine Triphosphatase	<i>Douglas J. Horgan and Ronald Kuypers</i>	183
Purification and Separation of Various Plasmid Forms by Exclusion Chromatography	<i>Nicole Moreau, Xavier Tabary, and François Le Goffic</i>	188
Iodinated Derivatives of the Hormone Avian Pancreatic Polypeptide	<i>Timothy C. Taylor and Joe R. Kimmel</i>	194
A Continuous Fluorescence Assay for Lecithin Cholesterol Acyltransferase	<i>Frank S. Bonelli, Katherine E. Kézdy, and Ana Jonas</i>	204
A Colorimetric Assay for α -Hydroxynitrile Lyase	<i>Dirk Selmar, F. J. P. Carvalho, and Eric E. Conn</i>	208
Deglycosylation of a Native, Protease-Sensitive Glycoprotein by Peptide N-Glycosidase F without Protease Inhibitors	<i>Barbara G. Langer, Sam K. Hong, Charles H. Schmelzer, and William R. Bell</i>	212
Elution Countercurrent Distribution	<i>Per-Åke Albertsson and Eva Hultin</i>	218
A Method for the Production of Highly Specific Polyclonal Antibodies	<i>Monique Diano, André Le Bivic, and Michel Hirn</i>	224
Glycosphingolipid Glycosyltransferase Assay Using Sephadex G-50 Chromatography in Aqueous Phase	<i>Mitsuru Nakamura and Charles C. Sweeley</i>	230

NUMBER 2, NOVEMBER 1, 1987

Review. Molecular Weight Standards for Calibration of Gel Filtration and Sodium Dodecyl Sulfate-Polyacrylamide Gel Electrophoresis: Ferritin and Apoferritin	<i>Christoph de Haën</i>	235
Isolation of Plasma Membranes from Neurons Grown in Primary Culture	<i>M. Mersel, I. Lelong, C. Hindelang, L. L. Sarlieve, and G. Vincendon</i>	246
Radioenzymatic Determination of Adenosine	<i>Marcella Camici, Umberto Mura, Antonella Del Corso, Stefania Gini, and Pier Luigi Ipata</i>	253
Lectin-Binding Assay by Polyethylene Glycol 8000	<i>Fatima E. Abidi, Subal Bishayee, Bimal K. Bachhawat, and Ranjan Bhadra</i>	257
Preparative Displacement Electrophoresis (Isotachophoresis) of Proteins on Cellulose Columns	<i>G. Johansson, L.-G. Öfverstedt, and S. Hjertén</i>	267
One-Step Enzyme Immunochromatographic Assay for Theophylline	<i>Thomas M. Li, Roulhwai Chen, Sidney Leeder, S. Nicholas Stiso, N. Chung Sizto, Robert F. Zuk, and David J. Litman</i>	276

Assay of Nucleoside-Diphosphate Kinase Activity by the Coupled Nucleotidyltransferase	<i>Norimitsu L. Sato</i>	284
On the Separation Ability of Various Ficoll Gradient Solutions in Zonal Centrifugation	<i>Peter N. Lavrenko, Olga I. Mikriukova, and Olga V. Okatova</i>	287
Microsequence Analysis of Peptides and Proteins: Trimethylsilylisothiocyanate as a Reagent for COOH-Terminal Sequence Analysis	<i>David H. Hawke, Hans-Werner Lahm, John E. Shively, and Charles W. Todd</i>	298
Copper Staining: A Five-Minute Protein Stain for Sodium Dodecyl Sulfate-Polyacrylamide Gels	<i>Chris Lee, Andrew Levin, and Daniel Branton</i>	308
Quantitative Description of Absorption Spectra of a Pyridoxal Phosphate-Dependent Enzyme Using Lognormal Distribution Curves	<i>Carol M. Metzler and David E. Metzler</i>	313
Isolation of Secretory Vesicles from <i>Saccharomyces cerevisiae</i>	<i>Cherie L. Holcomb, Tina Etcheverry, and Randy Schekman</i>	328
A Method for the Determination of Diffusion Coefficients for Small Molecules in Aqueous Solution	<i>Jeffrey R. Hazel and Bruce D. Sidell</i>	335
Design, Construction, and Use of an Electroporator for Plant Protoplasts and Animal Cells	<i>Harvey D. Bradshaw, Jr., William W. Parson, Meir Sheffer, Pamela J. Lioubin, Eileen R. Mulvihill, and Milton P. Gordon</i>	342
Recovery of Polypeptides from Polyacrylamide Gels by Electrophoretic Elution in a Centrifugation Concentrator	<i>Setsunosuke Ihara, Haruo Suzuki, and Masaya Kawakami</i>	349
Use of a 96-Well Microplate Reader for Measuring Routine Enzyme Activities	<i>Mohamed-Bassem A. Ashour, Shirley J. Gee, and Bruce D. Hammock</i>	353
Stimulation of Purified DNA Polymerase α by Various Basic Proteins Which Interact with Activated DNA	<i>Takashi Hironaka, Asako Itaya, Koichiro Yoshihara, Takeyoshi Minaga, and Tomoya Kamiya</i>	361
Tricine-Sodium Dodecyl Sulfate-Polyacrylamide Gel Electrophoresis for the Separation of Proteins in the Range from 1 to 100 kDa	<i>Hermann Schägger and Gebhard von Jagow</i>	368
A Chromogenic Oxidative Coupling Reaction of Laccase: Applications for Laccase and Angiotensin I Converting Enzyme Assay	<i>Takashi Shin, Sawao Murao, and Eiko Matsumura</i>	380
Use of Oligodeoxynucleotide Probes for Quantitative <i>in Situ</i> Hybridization to Actin mRNA	<i>Krishan Taneja and Robert H. Singer</i>	389
Microtiter Assay for Acetylcholinesterase	<i>B. P. Doctor, L. Toker, E. Roth, and I. Silman</i>	399
Paper Disk Assay for Glycosaminoglycan Sulfotransferases	<i>Kazuyuki Sugahara, Takako Ishii, and Ikuo Yamashina</i>	404
Colloidal Gold Staining and Immunoprobng of Proteins on the Same Nitrocellulose Blot	<i>Denise Egger and Kurt Bienz</i>	413
The pH Dependence of Spectral Parameters for Kalckar's Adenosine Deaminase Assay	<i>Giovanni Cercignani</i>	418
An Internal Standard Method for the Unattended High-Performance Liquid Chromatographic Analysis of Ascorbic Acid in Blood Components	<i>Mark A. Kutnink, Wayne C. Hawkes, Ellen E. Schaus, and Stanley T. Omaye</i>	424

9-Fluorenylmethoxycarbonylpyroglutamate, a Side-Product of Derivatization of Glutamate with 9-Fluorenylmethyl Chloroformate: A Warning <i>Hans-Jörg Keller, Kim Quang Do, Markus Zollinger, Kaspar H. Winterhalter, and Michel Cuénod</i>	431
Protein Precipitation Assay for Quantitation of Tannins: Determination of Protein in Tannin-Protein Complex <i>Harinder Paul S. Makkar, Rajinder K. Dawra, and Bhupinder Singh</i>	435
High-Performance Liquid Chromatography-Based Assay for the Quantitation of Protein Maleylation at the Picomole Level <i>Martin N. McCall and Simon B. Easterbrook-Smith</i>	440

ERRATUM

Volume 164, Number 1, July 1987: John O. Naim, Dominic M. Desiderio, Joann Trimble, and J. Raymond Hinshaw, "The Identification of Serum Tuftsin by Reverse-Phase High-Performance Liquid Chromatography and Mass Spectrometry," pp. 221-226	449
AUTHOR INDEX FOR VOLUME 166	450

The Subject Index for Volume 166 will appear in the December 1987 issue as part of a cumulative index for the year 1987.

INFORMATION FOR AUTHORS

Analytical Biochemistry is an international journal that publishes original articles on methods and methodology of interest to the biological sciences and all fields that impinge on biochemical investigation. In addition to the expected techniques that apply to biochemical preparations and analysis, the following should be considered as within the scope of the journal:

- Cell biology and cell, tissue, and organ culture methods that are of general application.
- Membranes and membrane proteins. These methods form a major section of interest.
- Procedures of interest in the field of molecular genetics including those necessary for cloning, sequencing, and synthesis of nucleic acids and for mutagenesis.
- Purification of enzymes and other proteins, but only if the methods are both novel and applicable generally, i.e., the interest is in a means of purification rather than in the protein that is being purified.
- Immunological techniques both analytical and preparative, if they are of general applicability by biochemists. Immunoassays are included but only if a unique approach is introduced rather than the determination of a substance not previously assayable.
- Pharmacological and toxicological research techniques that offer a biochemical approach.
- Review articles dealing with timely topics. Although these are generally invited, unsolicited outlines or manuscripts will be considered.

Manuscripts are accepted for review with the understanding that the same work has not been and will not be nor is presently submitted elsewhere, and that its submission for publication has been approved by all of the authors and by the institution where the work was carried out; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editor's discretion. Articles and any other material published in *Analytical Biochemistry* represent the opinions of the author(s) and should not be construed to reflect the opinions of the Editor(s) and the Publisher.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

Address. Manuscripts should be submitted in quadruplicate to *Analytical Biochemistry*, Editorial Office, Seventh Floor, 1250 Sixth Avenue, San Diego, California 92101. In the case of rejected manuscripts, only one copy of the manuscript will be returned to the author.

An extended Information for Authors is published in each July issue. Reprints are available from the Editorial Office. Authors should consult this Information for details on nomenclature, IUPAC-IUB rules and recommendations, and accepted abbreviations.

Manuscripts should be concise and consistent in style, spelling, and use of abbreviations. In order to facilitate the processing of manuscripts, the journal requests that at least four copies be submitted, each copy to include all figures (originals or glossy prints) and tables. The original copy must be typewritten, double-spaced, on one side of white bond paper, about $8\frac{1}{2} \times 11$ inches in size, with one-inch margins on all sides. Each manuscript should have a separate title page noting title of article, authors' names (without degrees), a running title (not exceeding 55 letters and spaces), an abstract (250 words), and the address to which proof should be mailed. In creating a title for your paper, please omit words such as *novel*, *rapid*, *improved*, *simple*, *sensitive*, *efficient*, *convenient*, *new*. Each is felt to be redundant and actually slows down the reader who is scanning the article titles and wants to know more about the method itself. Please substitute informative words that will give readers a more complete idea of the usefulness of your paper with regard to the limitations of their equipment or sample type. For example, what *kind* of method are you describing? Abbreviations should not be used in the article title or running title.

Please number all pages of the manuscript.

Authors should indicate the following on the title page: (1) the appropriate subject category for listing in the Table of Contents; (2) six descriptive key words for computer-aided selection of reviewers. (Please see the Appendix at the end of the extended Instructions to Authors published in the July 1, 1986 issue for a list of recommended key words.) These words will also be used in the preparation of the annual cumulative subject index for the journal.

Text. The suggested organization of an article is: abstract; introductory statement; Materials and Methods; Results; Discussion; Acknowledgments; References. Some of these sections may be combined if the presentation is thereby made clearer or more effective. Although this is the general form, the journal will accept short papers of approximately two printed pages that are arranged without specific sections except for a short abstract.

Names of chemical or organic substances should follow the recommendations of the IUPAC-IUB Combined Commission on Biochemical Nomenclature (CBN) as published in the extended Instructions for Authors, appearing in the July issue of this journal.

Authors should draw attention to any particular chemical or biological hazards that may be involved in carrying out the experiments described. Any relevant safety precautions should be

described; if an accepted code of practice has been followed, a reference to the relevant standards should be given.

Figures should be numbered consecutively with Arabic numerals in order of mention in the text: each figure should have a descriptive legend. Legends should be typed together on a separate sheet, double-spaced. All illustrations should be in finished form ready for photoreproduction. A convenient size for drawings is $8\frac{1}{2} \times 11$ in. (21×27.5 cm). Drawings should be made with India ink on tracing linen, smooth surface white paper, or Bristol board. Graph paper if used should be ruled in blue. Grid lines that are to show in the final reproduction should be inked in black. Glossy prints properly prepared are acceptable.

Photographs must be kept to a minimum. All photographs should be submitted as single glossy prints with strong contrasts and not mounted on cardboard; the magnification should be indicated by a scale where possible. **Simple histograms should be avoided. A table or a paragraph in the text is preferred.**

Illustrations in color can be accepted only if the authors defray the cost.

Tables should be typed on separate pages, numbered consecutively with Arabic numerals in order of mention in the text. Each table should have a short explanatory title.

Authors may wish to submit complex tables as camera-ready copy. In this way, they are spared tedious proofreading and the chance of error is reduced. Tables submitted as camera-ready copy should be typed single-spaced whenever possible, and preferably submitted as 5×7 -in. glossy prints.

Footnotes should be designated in text by superscript numbers and typed on a separate sheet. Footnotes to tables should be identified with lowercase italic superscript letters and placed at the bottom of the table.

References to the literature should be cited in the text by Arabic numerals in parentheses and listed at the end of the paper in consecutive order. Abbreviations of journal titles should follow the style used in *Chemical Abstracts Service Source Index*, 1985. Please note style of capitalization and punctuation for journal articles and edited books in the following examples:

1. Jackson, G. E. D., and Young, N. M. (1987) *Anal. Biochem.* **162**, 251–256.
2. Bovey, F. A., and Jelinski, L. W. (1983) Chain Structure and Conformation of Macromolecules, p. 150. Academic Press, New York.
3. Britton, G. (1985) in *Methods in Enzymology* (Law, J. H., and Rilling, H. C., Eds.), Vol. 111, pp. 113–149, Academic Press, Orlando, FL.

Proofs. Proofs will be sent to the authors with reprint order forms. Fifty reprints of each article are provided free of charge. Additional reprints may be ordered using the form provided.
